AMENDMENT

In response to the Office Action of November 6, 2001, Applicants filed herewith a Request for Continuing Examination (RCE), and amend the present application as follows:

In the Claims:

80. (Three times amended) A method of analyzing a sample in an integrated microfluidic device having at least two chambers in fluid communication, comprising:
- supplying the sample into a first chamber of the integrated microfluidic device, wherein the first chamber is selected from the group of chambers adapted to perform a preparative reaction, an analysis reaction, sample acquisition, DNA extraction, amplification, IV transcription or labeling;
 - performing a first reaction in the first chamber;
 - moving the sample from the first chamber to the second chamber, wherein the second chamber is selected from the group of chambers adapted to perform a preparative reaction, an analysis reaction including hybridization, sample acquisition, DNA extraction, amplification, IV transcription or labeling;
 - performing a second reaction in the second chamber, the second reaction being different from the first reaction; [and]
 - performing confocal microscopy on the hybridized sample by detecting an optical signal from the hybridized sample inside of the chamber using a reader device located outside of the chamber;
